

Sprint 3 Retrospective

What didn't go well

- Flask-Socket functionality took a long time to figure out. As a result of this, many other features had to be rushed due to time constraints. We didn't get to go as in depth in some features as we would have liked to.

What went well

- Everyone worked on their tasks and was able to finish it in a timely manner
- Completed all tasks
- Database transition from SQL based database to NoSQL based database was successfully. There were several issues we had with the SQL database prior to this, but after we switched to NoSQL most of these issues were solved.
